

KUARIO

SMART CONNECTOR

*Enable mobile
payments by
connecting your
self-service
machines
to the cloud*

Cloud connected self-service machines

The size of the interactive kiosk industry continues to grow and offers enormous prospects. Consumers who are used to pay with credit cards & online mobile wallets will soon expect the same convenience of these multiple payment options at every opportunity. Enabling mobile cashless payments with KUARIO at your unattended kiosk such as a Multi-Functional Printer, vending machine, kiddie ride, electric car charger or self-service laundry will leave you with large opportunities.

Powerfull solution

The smart connector is a powerful solution that can replace any electronic coin or banknote validator and manage any unattended device. Due to its flexible interface and multiple supported communication protocols, your device will be transformed into a cloud enabled self-service machine accepting mobile payments.

Implementing the Smart Connector will connect your machines to the cloud and upgrade your kiosks according to the latest (payment) technology, customer demand and enable you to create customer loyalty.

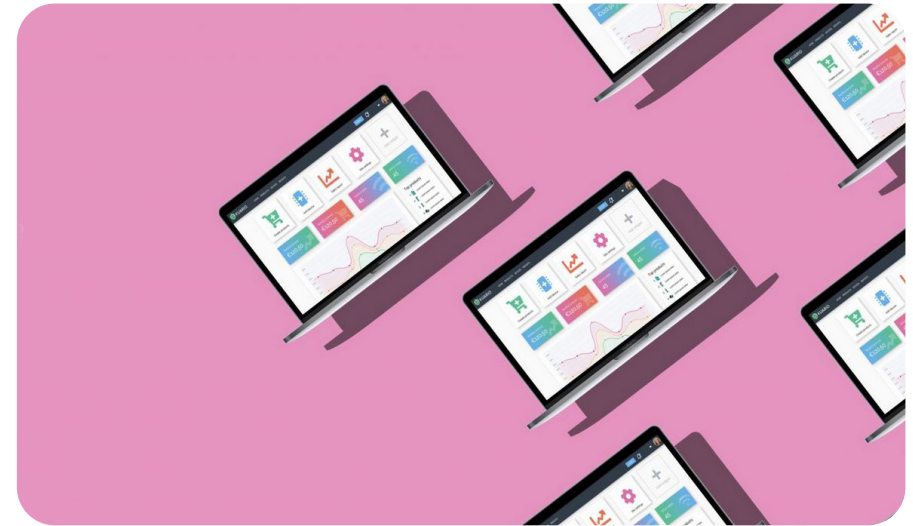

KUARIO cloud platform

The KUARIO cloud platform enables merchants, via a smart dashboard, to register, manage, monitor and optimize all self-service machines. The easy-to-use dashboard enables merchants to manage devices, configure product listings and set pricing.

KUARIO gives merchants a higher level of convenience by offering a clear insight on performance and a full suite of reporting abilities. This detailed information enables merchants to increase the success of their services or will point out devices that need optimization at specific locations.

End-users using KUARIO's micro payment platform can make mobile payments, view their transaction summary or balance, personalize their profile and more.

The KUARIO Smart Connector

Plug and Play

The KUARIO Smart Connector is a smart box built to the inside of the self-service kiosk without affecting the exterior. The KUARIO Smart Connector can be linked and configured in an instance via the KUARIO Mobile Service App. The service app is a specifically developed application for field service engineers to easily configure self-service kiosks. The KUARIO Smart Connector is cloud connected and software will be updated automatically.

The KUARIO Smart Connector seamlessly integrates with telemetry out of the vending machine or self-service kiosk. It provides cashless clearance, monitoring, management and Business Intelligence. KUARIO will give you real time insight on all aspects of your operation i.e. turnover, inventory, financial overview, machine monitoring, status alerts and reports.

The KUARIO Smart Connector enables mobile payments on the vending machine or kiosk. Either via scanning a QR-code. As an extra option, the KUARIO RFID reader can be added to accept transactions from all sorts of RFID cards (company, campus, school) that are linked to the users KUARIO account.

KUARIO benefits

- 24/7 redundant availability
- Microsoft Azure Global Data Centres
- Mobile app links any type of RFID badge automatically to a KUARIO account
- All major international and local payment methods (*Visa, MasterCard, PayPal & more*)

Cost savings:

- No need for investments in credit-/debit terminals.
- Reduced implementation & operating costs

Fast & easy installation and configuration:

- KUARIO Service app enables easy on site machine (re-)configuration
- Connect machines in the cloud & make them smarter
- Remote flexible pricing opportunities

Improved appearance & design:

- No need to physically modify the front display panel.
The KUARIO Smart Connector is integrated inside the machine

Online dashboard:

- Real time insight
- Reporting, telemetrics, clearing & settlement
- Multi-language
- Multi-currency
- Global coverage
- Intuitive UI
