KUARIO

NEXT GENERATION PAYMENT TERMINALS

Cloud connected Payment Terminals for Coins & Cards

Ideal for (semi-)public printers

Sales at unattended kiosks is estimated to grow rapidly. Consumers buying these goods and services want to be able to pay using the payment method of their own choice.

With the Internet of Things more and more unattended kiosks are connected worldwide, opening new possible ways of interaction. One important challenge today is how to service customers at these unattended kiosks like multifunction printers (MFP's) in (semi-)public spaces. They want to pay in their own preferred way.

How to connect these two worlds? With KUARIO you can!

KUARIO offers a portfolio of robust & reliable multi-channel payment solutions to the rapidly growing market of unattended kiosks.
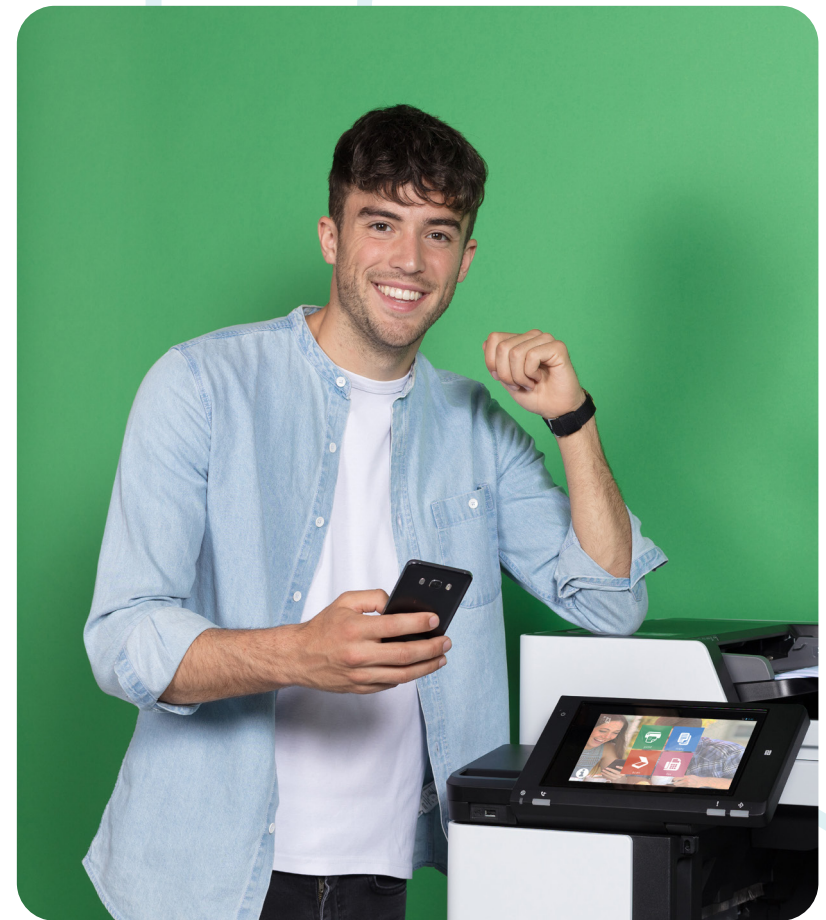

Bridging the gap

With the KUARIO app users can pay directly at the MFP using their mobile phone. However, there still is a demand from the market to pay with more conventional payment methods like cash & debit-/credit cards.

KUARIO developed a range of payment terminals to offer a suitable solution to fit this specific need. The KUARIO Payment Terminals seamlessly bridge the gap between traditional coin & card payments and our revolutionary mobile app for payments at MFP's.

The KUARIO Payment Terminal is a sturdy piece of hardware, proven by more than 25 years of experience. Thousands of printers worldwide use our payment terminals to pay for copies & prints.

Intergration cannot be easier, just plug & play. Connect the payment terminal to the KUARIO enabled MFP and you're ready to accept payments.

KUARIO Cards

KUARIO Coins & Cards

Cloud connected Payment Terminals for multifunction printers

KUARIO Payment Terminals are available in 2 versions; Cards and the Coins & Cards. Each version enables users to pay via different payment methods or a combination of them.
